Pre-launch SEO Strategy

A launch playbook for building organic foundations early. This is our approach, separate from the historical ranking case studies.

01 / BEFORE BUILD

Start with search intent

Map priority queries to the sitemap. Define page purpose, content briefs and internal-link relationships before design decisions harden.

02 / BEFORE RELEASE

Make the site search-ready

Check crawl access, canonical signals, metadata, redirects and measurement. Keep staging separate from the launch-ready site.

03 / AFTER LAUNCH

Validate, then improve

Check index coverage and search visibility, resolve early technical issues and use the first performance signals to prioritize the next work.
